- For each class, the current Quarter is listed as well as the current quarter average.
- In this example the teacher calculates the Quarter Grade based on Categories (Examinations, Homework, Journals & Projects, Quizzes) and therefore the display shows the category name and its corresponding average. The value of each category in the quarter average is also displayed. In the example above, Homework is 15% of the Quarter Grade and the student has a 100 homework average. At this point in the quarter, Homework is the only category with recorded grades, so the Quarter 1 average is 100.
- If a teacher calculates the Quarter Grade based on Total Points (points earned divided by points possible) the display shows each assignment and its corresponding grade.
